Cayosoft®
Microsoft 365 License Optimization

Simplify Licensing, Reduce Costs, and Avoid Outages

Microsoft 365 provides dozens of license options, which allow customers to tailor the service to their specific requirements and budgets. Yet managing and optimizing licenses is quite complex, as administrators must understand and configure a massive number of checkboxes to assign the correct licenses and access. The result is often over-licensed users and wasted money.

Optimize License Spending

Under-used and unassigned licenses represent wasted budget that could be used in other ways to improve services to users. Cayosoft provides actionable insights on unused licenses, opportunities for cost savings, and alerts on low license counts. Automated usage analysis determines the optimal and lowest-cost license needed for each user.

The price difference between the list price of an E5/G5 license and a mailbox license can be up to $372 per user per year. Without the ability to accurately judge usage, you could face significant costs in terms of over-licensing and lost productivity. Cayosoft identifies users' licenses that should be optimized and shows you if the license can be changed.

Optimize License Assignments

Cayosoft Solutions

License & Cost Optimization
Optimize assignment based on user usage, reclaim licenses, and keep costs manageable

Automate License Assignment
Configure rules to create automatic and dynamic license assignment
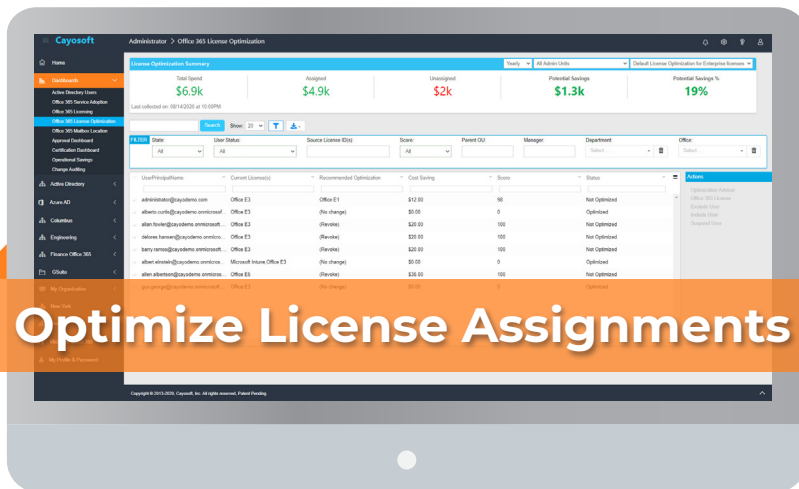

Delegate License Administration
Control which licenses day-to-day admins can see. Simplify licensing and avoid mistakes.

Visibility & Reporting
Gain visibility to optimize license assignment. Easily see who is not assigned the correct license.

Quota Pools to Divide Tenant Licenses
Divvy up single tenant licenses by Department, OU, or other administrative boundaries.
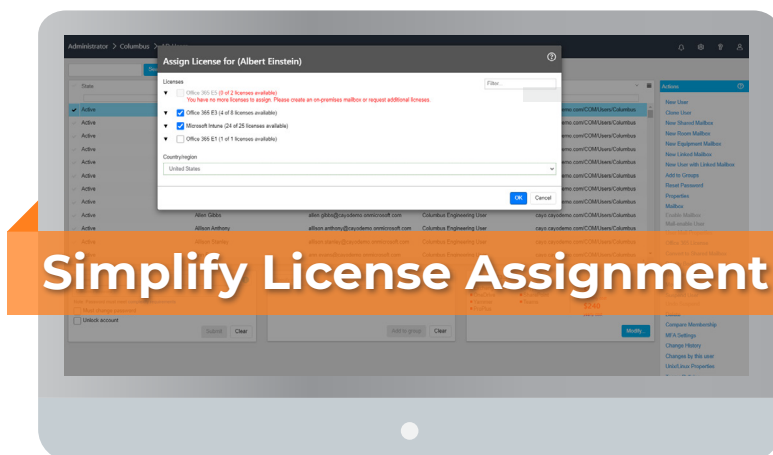

Complete Management, Automation, & Protection for On-Premises, Hybrid, & Azure AD, & Microsoft 365

Automate License Assignments

Implement Rules to Streamline License Assignment

Cayosoft's automatic license rules are easily configured to target only the users that require a specific type of license. Licensing rules can be scheduled to run at a predetermined time and will inspect and correct any licenses or options that are not aligned with the settings on the rule. Add and adjust licenses following user attributes or groups without human involvement. Reclaim unused licenses from inactive or disabled users to return them to your pool.

Control License Availability

License quota pools allow you to efficiently divide-up a single tenant's licenses by Department, OU, or other administrative boundary. Cayosoft also enables granular delegation, to limit available license options among delegated admins to ensure easy, accurate assignment. Use Cayosoft to provide only the subset of license options you want them to see, helping to avoid mistakes and reducing the information needed to perform accurate license assignment.

Prevent Outages and Costly Downtime

Additional control and visibility will help you to avoid outages due to license assignment mistakes, under-licensed or mis-licensed assignments. Audit license changes for each use, including before and after license values, so that troubleshooting license problems is simple and efficient.

Cayosoft®
Administrator
Secure. Manage. Automate.

Cayosoft Administrator is the only complete management solution for your entire cloud IT journey, from on-premises to hybrid, to the cloud. Purpose-built for hybrid and cloud Microsoft environments, Cayosoft Administrator secures, automates, and streamlines day-to-day IT administration.

Cayosoft products are easy to install, configure, and use. With friendly, subscription-based licensing and responsive support Cayosoft is proud of its 99% customer retention rate. We are also proud to offer a variety of support options to help ensure your success.

Cayosoft Features

- 12 month subscription license with support
- Access to the latest features and product upgrades
- Premier and Standard support with phone and online options for contact
- Access to the Cayosoft Support Center, including documentation, articles, case studies, and community discussions
