

# Cayo | Suspend™ for Active Directory

## Temporarily or Permanently Suspend Users and Groups

Cayo | Suspend™ empowers administrators to efficiently and accurately suspend user or groups preventing costly security and compliance violations. The tool is simple to deploy and easy to use and requires no heavy service or infrastructure. Easily configured policies immediately begin to enforce consistent and effective control meeting your IT and Compliance requirements for revoking access. With Cayo | Suspend your administrators will no longer struggle to perform dozens of potentially error prone steps and you won't have to maintain risky or awkward scripts.

*"We choose Suspend because disable and delete were just not enough. The solution not only helped define our deprovisioning process, it also satisfied our auditor's requirements."*

*John H,  
Active Directory  
Administrator for a  
large media company*

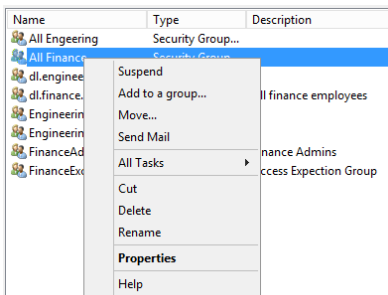

## Sustain Compliance and Security Initiatives

It is natural for people to join and leave an organization. Sometimes people leave an organization temporarily for medical reasons or for military deployments. Permanent departures are typically due to retirements or terminations. In both cases, security and compliance requirements demand that the user's Active Directory account must be terminated quickly and accurately. Unfortunately, Active Directory provides only Delete or Disable as options. To properly suspend and secure Active Directory users or groups, a complex and potentially error prone process must be followed. Because native tools lack a "suspend" process, security and compliance requirements are put at risk. Improperly suspending a user or group can cause the organization to be subject to security breaches, audit failures and potential fines.

## Delete & Disable are not enough

Deleting users and groups is unacceptable because they are unavailable when needed for audit or security reasons. Disabling a user account is risky if additional steps are not taken to ensure the account won't be re-enabled with unintended consequences. Disabling a group isn't provided by Active Directory.

**Better than Delete & Disable:** Cayo | Suspend delivers something better than Delete or Disable; it puts a "Suspend" command at your fingertips. Suspend invokes Policy Workflow steps that prevent user accounts from authenticating and group from being used for security or distribution list operations. With right-click undo, reactivating the user or group is just a mouse click away.

Seamless integration with Active Directory Users & Computers

## Software Requirements

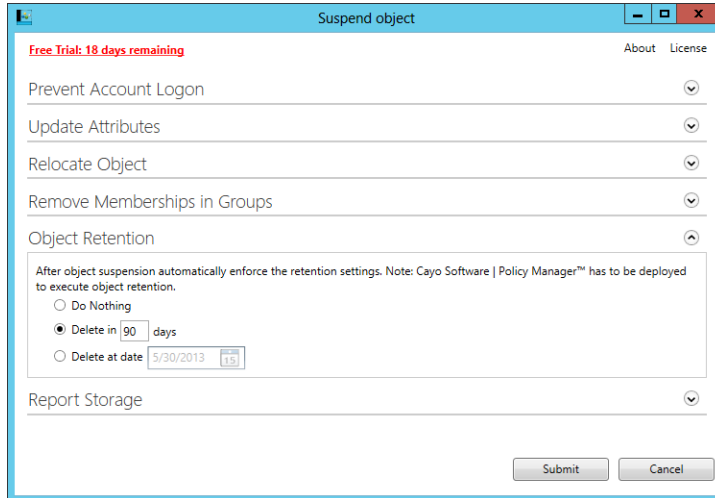

- Windows Workstation XPSP3 or later
- Windows Server 2008r2 or later
- Microsoft .Net Framework 4.0
- Active Directory Users and Computers MMC snap-in

## Permission Requirements

- Setup - Administrator permissions on the workstation or server running Active Directory Users and Computers
- Setup - Administrator permission in Active Directory to register display specifiers (First install only, no schema extensions)
- Using - Permissions in Active Directory to modify & disable Users and Groups

## Licensing

Cayo | Suspend is licensed per enabled Active Directory user in each domain to be managed.

## Features: Users Suspend

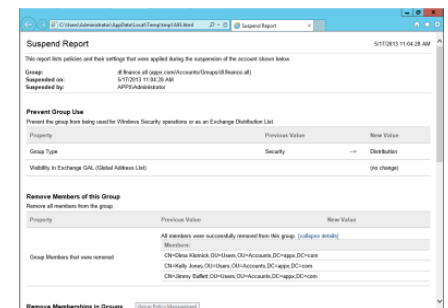

- Permanent or Temporary Account Suspension
- Right-click Undo
- Active Directory Users and Computers Integration
- Auditor friendly reporting for security or compliance audits
- Policy Workflow:
  - Prevent Logon
  - Update Attribute(s)
  - Relocate Object
  - Clear User's Group Memberships
  - Storage of Audit Details
  - Retention Period (Requires Cayo | Policy Manager™)
  - Scheduled Reactivation (Requires Cayo | Policy Manager™)

## Features: Groups Suspend

- Permanent or Temporary Group Object Suspension
- Right-click Undo Active Directory Users and Computers Integration
- Auditor friendly reporting for security or compliance audits
- Policy Workflow:
  - Prevent use for Security and Distribution List operations
  - Update Attribute(s)
  - Relocate Object
  - Clear Group Members
  - Clear this Group's Memberships in other groups
  - Storage of Audit Details
  - Retention Period (Requires Cayo | Policy Manager™)
  - Scheduled Reactivation (Requires Cayo | Policy Manager™)

## Auditor Friendly Reports

Any time a user or group is suspended the actions taken against the object must be recorded and available for review by auditors. Cayo | Suspend provides auditor friendly reports that are just a mouse click away. Both Suspend and Un-Suspend reports storage options are also provided.

## Cayo | Policy Manager™ Integration

Thoughtful product Integration provides a service component that monitors AD for Suspended Accounts and enforces the object retention policy.
