Cayosoft Admin Assistant™ 2.7 Released

Simplified Administration for Active Directory and Office 365

COLUMBUS, OHIO April 3rd, 2014 – Cayosoft has announced the release of **Cayosoft Admin Assistant™** version 2.7. With simplified setup and expanded capabilities, Admin Assistant's unique cloud-ready architecture makes Cayosoft the leader in simplifying Active Directory and Office 365 Administration.

"This release was driven by customer feedback. Customers asked us to improve visibility and control over Office 365 and simplify deployment and the use of our product. We added dozens of templates that expose new Office 365 and Azure Active Directory information giving administrators the visibility not provided by Microsoft. To simplify our product we added step-by-step wizards for deployment and operation of the product," said Bob Bobel, Director of Product Management for Cayosoft.

Version 2.7 provides greater visibility into Office 365 with the addition of twenty new rule templates. These templates provide details not easily retrieved from the native Office 365 and can be used for either targeting administrative action or for simple reporting.
With the addition of these rules - Admin Assistant now boasts more than 40 Office 365 templates for search, taking administrative action and reporting on Office 365.

"To my knowledge, we are the only vendor providing this unique architecture that simplifies administration across on-premises, public cloud and hybrid deployments," said Bobel

Also new in version 2.7 are a configuration wizard and a rule creation wizard. Both wizards vastly simplify deploying and using the product. The New Rule Wizard simplifies the creation of rules reducing time to value of the product. Rules that were complex to create in the past such as creating default mailbox signature blocks in Office 365 from Active Directory data can now be built in only a few minutes.

Cayo Admin Assistant comes with a fully functional 25-day trial license so administrators, help desk staff and IT Managers can try the product for themselves by simply downloading the product from http://www.cayosoft.com/download/. After the free trial, subscription, perpetual and freeware licenses are available.
