

Cayosoft® Dynamic Groups

The best way to manage Groups in the Microsoft Enterprise

Groups are a critical mechanism used to control complex access data in every organization. Unfortunately, group membership management is a time consuming, manual and error prone process that can result in costly security and compliance failures. As such groups become a favorite target of auditors, compliance officers and even criminals and therefore must be managed in a secure, efficient and compliant way. The solution is Cayosoft Dynamic Groups.

Cayosoft Dynamics Groups offers flexible membership rules that dynamically and accurately update group memberships when needed, reducing complexity and enabling administrators to concentrate on what is most important. And **because Cayosoft Dynamic Groups** automates group memberships security, efficiency and compliance goals are sustained 24x7x365.

Cayosoft® Dynamic Groups

The True Cost of Group Management

Most people don't realize that keeping groups up to date manually is a time consuming and error prone process. Each time a user changes jobs, offices or projects the user will need to be added to new groups and removed from old groups. All this effort has a real cost that can be reduced with Automation.

	Read Request E-mail/Ticket	+	Add to Group	+	Remove from Group	X	Changes per user per year
Manual	1.5 minutes		1.5 minutes		2.0 minutes		5 Changes Per user 25 minutes Per year per user
Cayosoft	Automatic		Automatic		Automatic		Automatic
Average cost savings using Cayosoft \$16 to \$17 per user							

*Average Admin Salary from payscale.com

- **Automatically update group membership when user data changes** – Many group membership decisions are made based on the geographical or organizational attributes of an employee. As new employees are hired, or existing employees change job roles attribute details such as City, Department, Country or Job Title can be used to make accurate and automatic membership decisions.
- **Fine-grained Criteria based Membership Rules accurately identify group members** – Flexible criteria-based Rules are at the heart of Cayosoft Dynamic Groups. These rules allow an administrator to define fine-grained criteria to correctly identify authorized group members.
- **Dynamic Groups works with or without on-premises Active Directory** – Unlike other solutions, Dynamic Groups does not require an on-premises Active Directory to work. This means you have the flexibility to deploy the solution for Cloud Only, On-Premises Only or Hybrid Environments.
- **Eliminates complex or unreliable scripts** – Dynamic groups provides a point-and-click interface allowing admins to construct criteria-based rules to automate group membership without resorting to complex scripts.
- **Works on-premises, in hybrid, and cloud-only environments** – Built with modern IT needs in mind, Dynamic Groups works with traditional on-premises infrastructures as well as cloud and hybrid deployments. Dynamic Groups is also compatible with Microsoft Directory Sync and Google Directory Sync for customers synchronizing Active Directory groups to cloud applications.
