

Complete Hybrid Office 365 Management & Protection for Federal, State and Local Governments

Adopting Office 365 is not a guaranteed success, but Cayosoft Hybrid Management & Protection can help!

For every government customer, Microsoft's Office 365 offering brings the promise of huge operational benefits. Achieving these benefits, however, is often challenging because Office 365 management doesn't easily map onto a multi-departmental or multi-agency distributed environment. Rarely can a governmental customer simply drop existing on-premises systems like Active Directory (AD) and go cloud-only. As such, these customers are left with a complex mix of management interfaces, security models, manual procedures, and complex scripts—all of which put operational goals in jeopardy.

Hybrid changes everything!

Most enterprises see Hybrid as an opportunity to "reboot" old standards while improving security, efficiency, and compliance. Legacy tools, with their outdated on-premise architectures, become barriers to the new Hybrid IT Enterprise Model. Cayosoft eliminates these barriers by making Hybrid AD administrative tasks virtually invisible. [Find out how](#) the Cayosoft platform helps customers remove barriers to Hybrid Office 365 that prevent them from moving to a secure and efficient Microsoft Hybrid deployment.

Hybrid management is error-prone and time consuming, making it a challenge for day-to-day admins and help desk to do their jobs. Hybrid tasks like user provisioning, renaming users, or bulk assignment of licenses often require complex scripting or error-prone procedures. Cayosoft eliminates these problems with the only true Hybrid *and* Cloud management platform.

Purpose built for your IT Cloud Journey

Cayosoft simplifies and secures Hybrid management, making it easy for day-to-day admins or help desk to do their jobs, all from single web portal and without scripts. After automated provisioning, tasks are assigned to admins by "Virtual OUs" so you can manage Office 365 just like Active Directory.
