Cayosoft Dynamic Groups

The best way to manage groups in the hybrid Microsoft enterprise

Groups are a critical mechanism used to control complex access data in every organization. Unfortunately, group membership management is usually manual and time consuming, which can result in costly security and compliance failures. It's no surprise that groups have become a favorite target of auditors, compliance officers and even criminals and therefore must be managed in a secure, efficient and compliant way. The solution is Cayosoft Dynamic Groups.

Cayosoft Dynamics Groups offers flexible membership rules that dynamically and accurately update group memberships when needed, reducing complexity and enabling administrators to concentrate on what is most important. And because Cayosoft Dynamic Groups automates group memberships security, efficiency and compliance goals are sustained 24x7x365.

The true cost of group management

Manually keeping groups up to date is not only time consuming, but has a huge potential for error. Each time a user changes jobs, offices or projects, that user will need to be added to new groups and removed from old groups. All this effort has a real cost that can be reduced with automation.

	Read Request E-mail/Ticket	+	Add to Group	+	Remove from Group	X	Changes per user per year	
Manual	1.5 minutes		1.5 minutes		2.0 minutes		5 Changes Per user	25 minutes Per year per user
Cayosoft	Automatic		Automatic		Automatic			Automatic
	Average cost savings using Cayosoft $16 to $17 per user

Cayosoft Dynamic Groups

Automatically update group membership when user data changes.
Many group membership decisions are made based on the geographical or organizational attributes of an employee. As new employees are hired, or existing employees change job roles attribute details such as City, Department, Country or Job Title can be used to make accurate and automatic membership decisions.

Fine-grained criteria based membership rules accurately identify group members
Flexible criteria-based rules allow administrators to define detailed criteria to correctly identify authorized group members.

Single hybrid solution works with or without on-premises Active Directory
Deploy Dynamic Groups in cloud-only, on-premises or hybrid environments. Dynamic Groups is also compatible with Microsoft Directory Sync and Google Directory Sync for customers synchronizing Active Directory groups to cloud applications.

Eliminate complex or unreliable scripts
Point-and-click interface allows admins to construct criteria-based rules to automate group membership without resorting to complex scripts.

Enable self-service group management
Eliminate expensive and time-consuming help desk tickets for group management. Allow distribution list, application, and data owners to manage who has access to their resource. Group Owners can also publish their groups, allowing others to request access-with approval required-before users are added to their group

Certify with attestation
Certification reviews periodically ask group owner to verify the need for and accuracy of group membership to satisfy key compliance control & audit requirements. Security and Compliance Certification Reviews with-Attestation-Satisfies many legal, regulatory, compliance and security requirements. In addition to verifying group membership, these controls identify and optionally suspend/disable unused or unwanted groups, reducing your overall management burden.
