Management and Protection Suite

Manage, Monitor, and Recover Microsoft Environments

Purpose-built for modern Microsoft environments, the Management and Protection Suite offers a complete solution for organizations, regardless of which stage of the journey to Microsoft 365 your in. The Management and Protection Suite includes both Administator and Guardian to ensure security and protection, all while improving efficiency.

Secure & Streamline Hybrid Administration

Maintain complete control of what day-to-day administrators can see and do. One unified set of easy-to-configure Roles enforce a granular, least-privileged administrative model over all of the systems being managed, even in complex hybrid environments.

Monitor & Recover Suspect Changes

Quickly and simply view, understand, and restore mistakes or changes across your entire hybrid AD environment, in a single unified platform. Identify and instantly rollback single or groups of changes from a secure, continuous backup.

Improve Efficiency & Minimize Outages

Bulk management avoids wasting valuable time and possible errors that come with manually updating larger numbers of user accounts and other objects. Change alerts ensure a fast response to thwart attacks, protect privileged identities, and secure sensitive information.

Cayosoft Solutions

Administration
Automate and control day-to-day IT tasks

Group Management
Keep groups accurate and up-to-date automatically

Microsoft Teams Management
